

Alaska and the Census

The U.S. Census Bureau's goal for the federal decennial census is **to count all the people** living in the United States, **count them only once and count them in the right place**. States care about the census because its data are used for the distribution of federal funding and political power, and is used by decision-makers in the private and public sectors at all levels.

The census is a **federal project** conducted with federal funding, although **some states, including Alaska, have allocated funding for census outreach**.

This profile includes: a) what census data means for Alaska in terms of political and economic power, b) key demographic data for Alaska, and c) what Alaska is doing to encourage a full count.

POLITICAL POWER

Every decade, the seats in the U.S. House of Representatives are recalculated based on the latest census data. The new apportionment of congressional seats will be released on Dec. 31, 2020. According to Election Data Services, **Alaska is projected to keep the same number of seats, which is 1 congressional seat**. That means Alaska also will have the same number of electoral college seats.

Census data is also the foundation for **Alaska's Redistricting Board to draw legislative districts and Alaska's legislature to draw its one district**.

CORE ALASKA STATS

Alaska's total population was 710,231, according to the 2010 Census. **In 2018, the Census Bureau's estimate for Alaska's population was 737,438, a growth of 3.83% in nine years**. Alaska has the 48th largest population in the nation, and its growth rate is 26th.

HARD TO COUNT POPULATIONS AND UNDERCOUNTS

The Census Bureau estimates **25.2% of people in Alaska did not self-respond to the 2010 census**, representing what have come to be known as "hard to count" populations. Generally, the hard-to-count groups tend to be children younger than 5, immigrants, racial and ethnic minorities, rural residents, low-income people, homeless and Native Americans.

Nationwide, the Census Bureau estimated an overcount of 0.01% in 2010, though individual states could have either an overcount or an undercount. Both overcounts and undercounts can create inaccuracies and affect states' needs. In **Alaska the overcount was estimated at 5,300**. Undercounts affect a state's federal funding and potentially congressional representation if they are on the cusp of losing or gaining a seat.

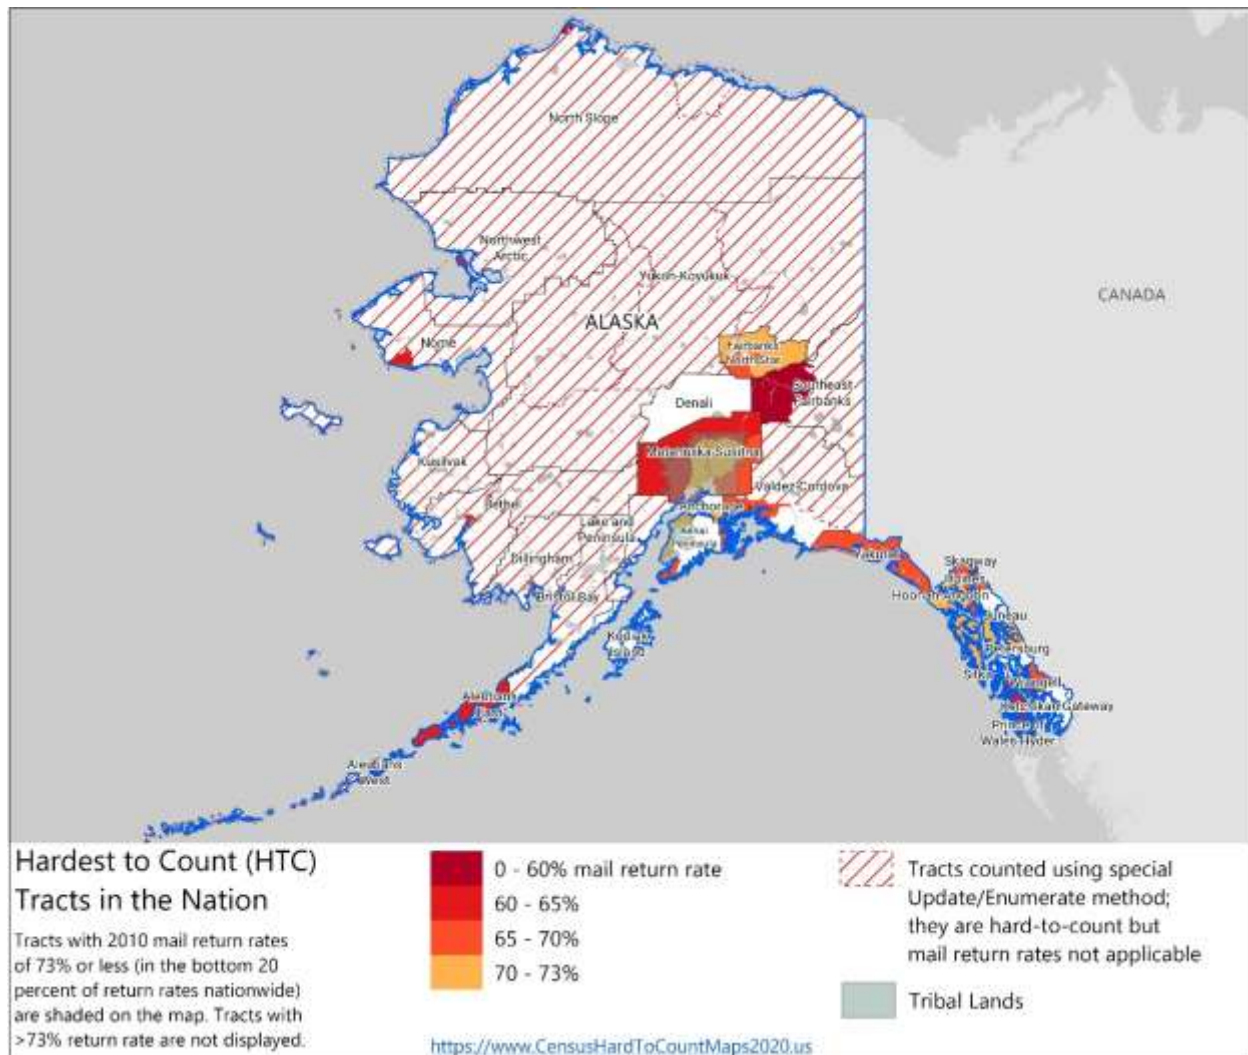

ECONOMIC POWER

Federal funding is distributed to states and localities based on formulas that rely on census data. Based on Counting for Dollars 2020 by Andrew Reamer of George Washington University, **Alaska received \$3,194,463,262 in FY2016** from federal funds distributed through 55 federal spending programs that are guided by data derived from the 2010 census. **That equals \$4,497.78 per Alaska resident**, on average, and every year in this decade.

Private and public sector decisionmakers often rely on census data as well. The Census Bureau has created several tools for public use, including the Economic Census and the Census Business Builder.

ENSURING A COMPLETE COUNT

Alaska has created the **2020 Census Alaska Complete County Commission**, and appropriated \$600,000 for outreach to ensure that Alaska residents are all counted.
