

Arizona and the Census

The U.S. Census Bureau's goal for the federal decennial census is to **count all the people** living in the United States, **count them only once and count them in the right place**. States care about the census because its data are used for the distribution of federal funding and political power, and is used by decision-makers in the private and public sectors at all levels.

The census is a **federal project** conducted with federal funding, although **some states have allocated funding for census outreach**.

This profile includes: a) what census data means for Arizona in terms of political and economic power, b) key demographic data for Arizona, and c) what Arizona is doing to encourage a full count.

POLITICAL POWER

Every decade, the seats in the U.S. House of Representatives are recalculated based on the latest census data. The new apportionment of congressional seats will be released on Dec. 31, 2020. According to Election Data Services, **Arizona is projected to gain a seat**, going from 9 to 10 congressional seats. That means Arizona also will have one more electoral college seat.

Census data is also the foundation for **Arizona's Independent Redistricting Commission to draw congressional and legislative districts**.

CORE ARIZONA STATS

Arizona's total population was 6,392,017, according to the 2010 Census. **In 2018, the Census Bureau's estimate for Arizona's population was 7,171,646, a growth of 12.20% in nine years.** Arizona has the 14th largest population in the nation, and its growth rate is 7th.

HARD TO COUNT POPULATIONS AND UNDERCOUNTS

The Census Bureau estimates **22.4% of people in Arizona did not self-respond to the 2010 census**, representing what have come to be known as "hard to count" populations. Generally, the hard-to-count groups tend to be children younger than 5, immigrants, racial and ethnic minorities, rural residents, low-income people, homeless and Native Americans.

Nationwide, the Census Bureau estimated an overcount of 0.01% in 2010, though individual states could have either an overcount or an undercount. Both overcounts and undercounts can create inaccuracies and affect states' needs. **In Arizona the overcount was estimated at 26,200.** Undercounts affect a state's federal funding and potentially congressional representation if they are on the cusp of losing or gaining a seat.

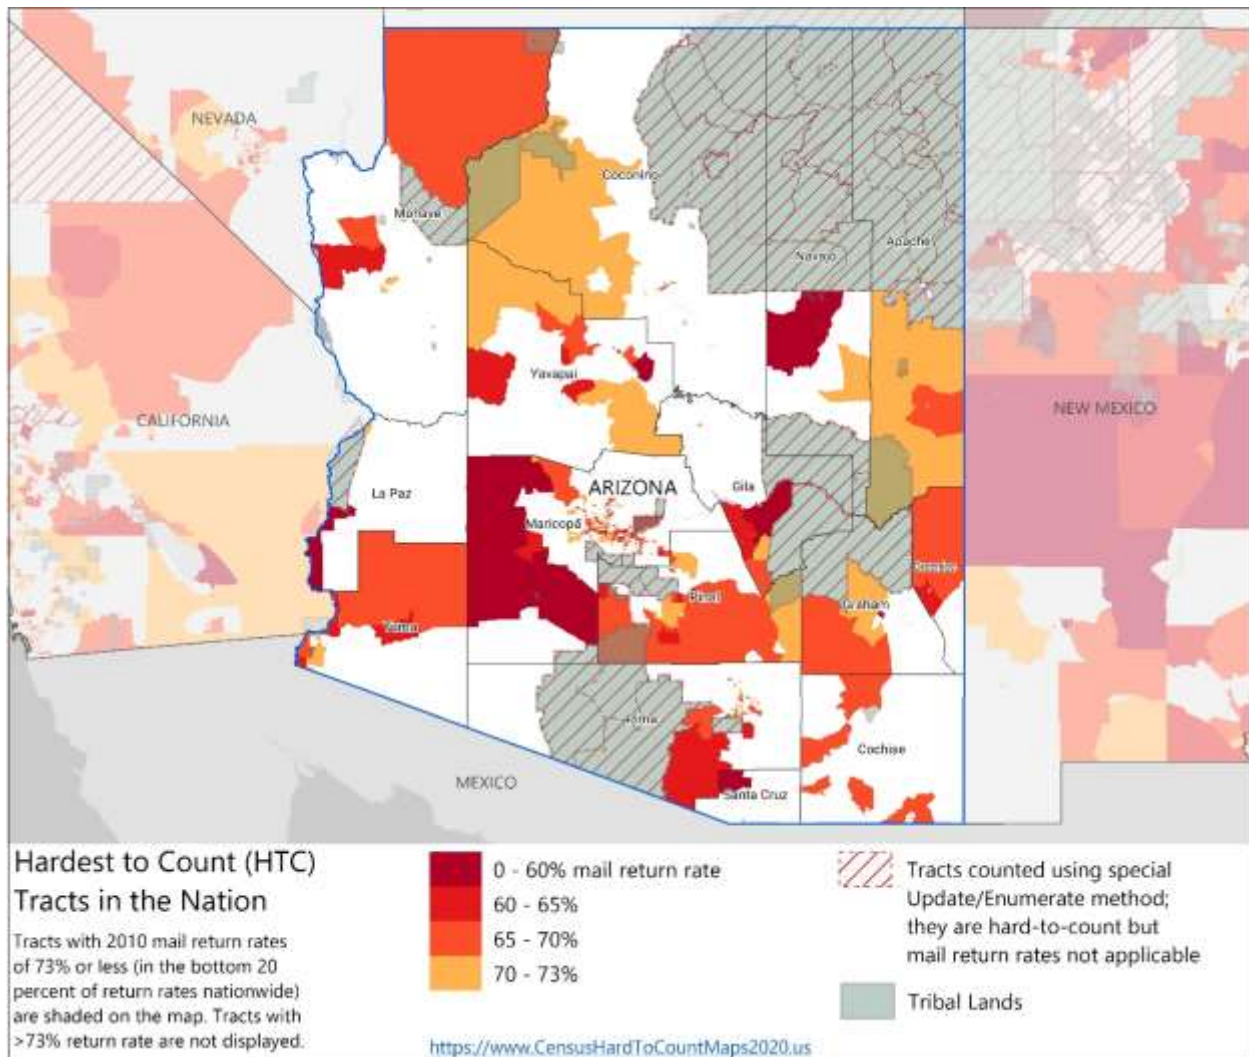

ECONOMIC POWER

Federal funding is distributed to states and localities based on formulas that rely on census data. Based on Counting for Dollars 2020 by Andrew Reamer of George Washington University, **Arizona received \$20,550,087,125 in FY2016** from federal funds distributed through 55 federal spending programs that are guided by data derived from the 2010 census. **That equals \$3,214.96 per Arizona resident**, on average, and every year in this decade.

Private and public sector decisionmakers often rely on census data as well. The Census Bureau has created several tools for public use, including the Economic Census and the Census Business Builder.

ENSURING A COMPLETE COUNT

Arizona has created the **Arizona Complete Count Committee**. While some states are providing additional funds, others have decided not to do. Their reasoning stems from the fact the census is a federal action and there are already many local committees and philanthropic and nonprofit agencies working to support it.
