

## Arkansas and the Census

The U.S. Census Bureau's goal for the federal decennial census is to **count all the people** living in the United States, **count them only once and count them in the right place**. States care about the census because its data are used for the distribution of federal funding and political power, and is used by decision-makers in the private and public sectors at all levels.

The census is a **federal project** conducted with federal funding, although **some states have allocated funding for census outreach**.

This profile includes: a) what census data means for Arkansas in terms of political and economic power, b) key demographic data for Arkansas, and c) what Arkansas is doing to encourage a full count.

### POLITICAL POWER

Every decade, the seats in the U.S. House of Representatives are recalculated based on the latest census data. The new apportionment of congressional seats will be released on Dec. 31, 2020. According to Election Data Services, **Arkansas is projected to keep the same number of seats**, which is 4 congressional seats. That means Arkansas also will have the same number of electoral college seats.

Census data is also the foundation for Arkansas General Assembly to draw congressional districts and the Board of Apportionment draws the legislative districts.

### CORE ARKANSAS STATS

Arkansas' total population was 2,915,918, according to the 2010 Census. **In 2018, the Census Bureau's estimate for Arkansas' population was 3,013,825, a growth of 3.36% in nine years.** Arkansas has the 33<sup>rd</sup> largest population in the nation, and its growth rate is 28<sup>th</sup>.

### HARD TO COUNT POPULATIONS AND UNDERCOUNTS

The Census Bureau **estimates 23.0% of people in Arkansas did not self-respond to the 2010 census**, representing what have come to be known as "hard to count" populations. Generally, the hard-to-count groups tend to be children younger than 5, immigrants, racial and ethnic minorities, rural residents, low-income people, homeless and Native Americans.

Nationwide, the Census Bureau estimated an overcount of 0.01% in 2010, though individual states could have either an overcount or an undercount. Both overcounts and undercounts can create inaccuracies and affect states' needs. **In Arkansas the overcount was estimated at 11,500.** Undercounts affect a state's federal funding and potentially congressional representation if they are on the cusp of losing or gaining a seat.

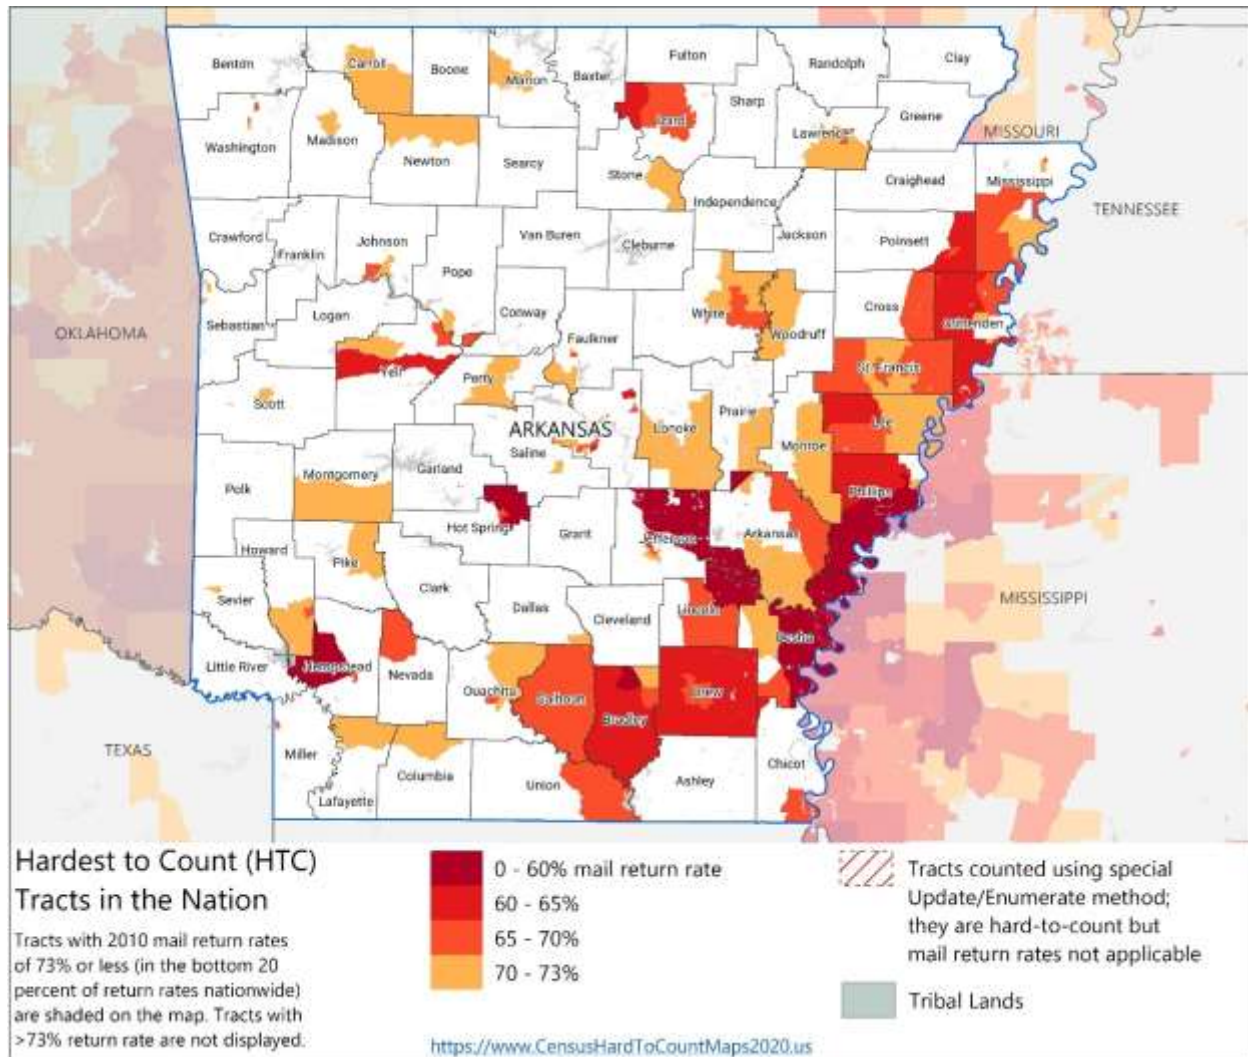

### ECONOMIC POWER

Federal funding is distributed to states and localities based on formulas that rely on census data. Based on Counting for Dollars 2020 by Andrew Reamer of George Washington University, **Arkansas received \$9,867,323,057 in FY2016** from federal funds distributed through 55 federal spending programs that are guided by data derived from the 2010 census. **That equals \$3,383.95 per Arkansas resident**, on average, and every year in this decade.

Private and public sector decisionmakers often rely on census data as well. The Census Bureau has created several tools for public use, including the Economic Census and the Census Business Builder.

## ENSURING A COMPLETE COUNT

Arkansas has created the **Arkansas Census 2020 Complete Count Committee**. While some states are providing additional funds, others have decided not to do. Their reasoning stems from the fact the census is a federal action and there are already many local committees and philanthropic and nonprofit agencies working to support it.
