

## Colorado and the Census

The U.S. Census Bureau's goal for the federal decennial census is to **count all the people** living in the United States, **count them only once and count them in the right place**. States care about the census because its data are used for the distribution of federal funding and political power, and is used by decision-makers in the private and public sectors at all levels.

The census is a federal project conducted with federal funding, although **some states, including Colorado, have allocated funding for census outreach**.

This profile includes: a) what census data means for Colorado in terms of political and economic power, b) key demographic data for Colorado, and c) what Colorado is doing to encourage a full count.

### POLITICAL POWER

Every decade, the seats in the U.S. House of Representatives are recalculated based on the latest census data. The new apportionment of congressional seats will be released on Dec. 31, 2020. According to Election Data Services, **Colorado is projected to gain a seat**, going from 7 to 8 congressional seats. That means Colorado also will have one more electoral college seat.

Census data is also the foundation for **Colorado's redistricting commissions to draw congressional and legislative districts**.

### CORE COLORADO STATS

Colorado's total population was 5,029,196, according to the 2010 Census. **In 2018, the Census Bureau's estimate for COLORADO's population was 5,695,564, a growth of 13.25% in nine years.** Colorado has the 21st largest population in the nation, and its growth rate is fourth.

### HARD TO COUNT POPULATIONS AND UNDERCOUNTS

The Census Bureau estimates **20.9% of people in Colorado did not self-respond to the 2010 census**, representing what have come to be known as "hard to count" populations. Generally, the hard-to-count groups tend to be children younger than 5, immigrants, racial and ethnic minorities, rural residents, low-income people, homeless and Native Americans.

Nationwide, the Census Bureau estimated an overcount of 0.01% in 2010, though individual states could have either an overcount or an undercount. Both overcounts and undercounts can create inaccuracies and affect states' needs. **In Colorado the overcount was estimated at 14,100.** Undercounts affect a state's federal funding and potentially congressional representation if they are on the cusp of losing or gaining a seat.

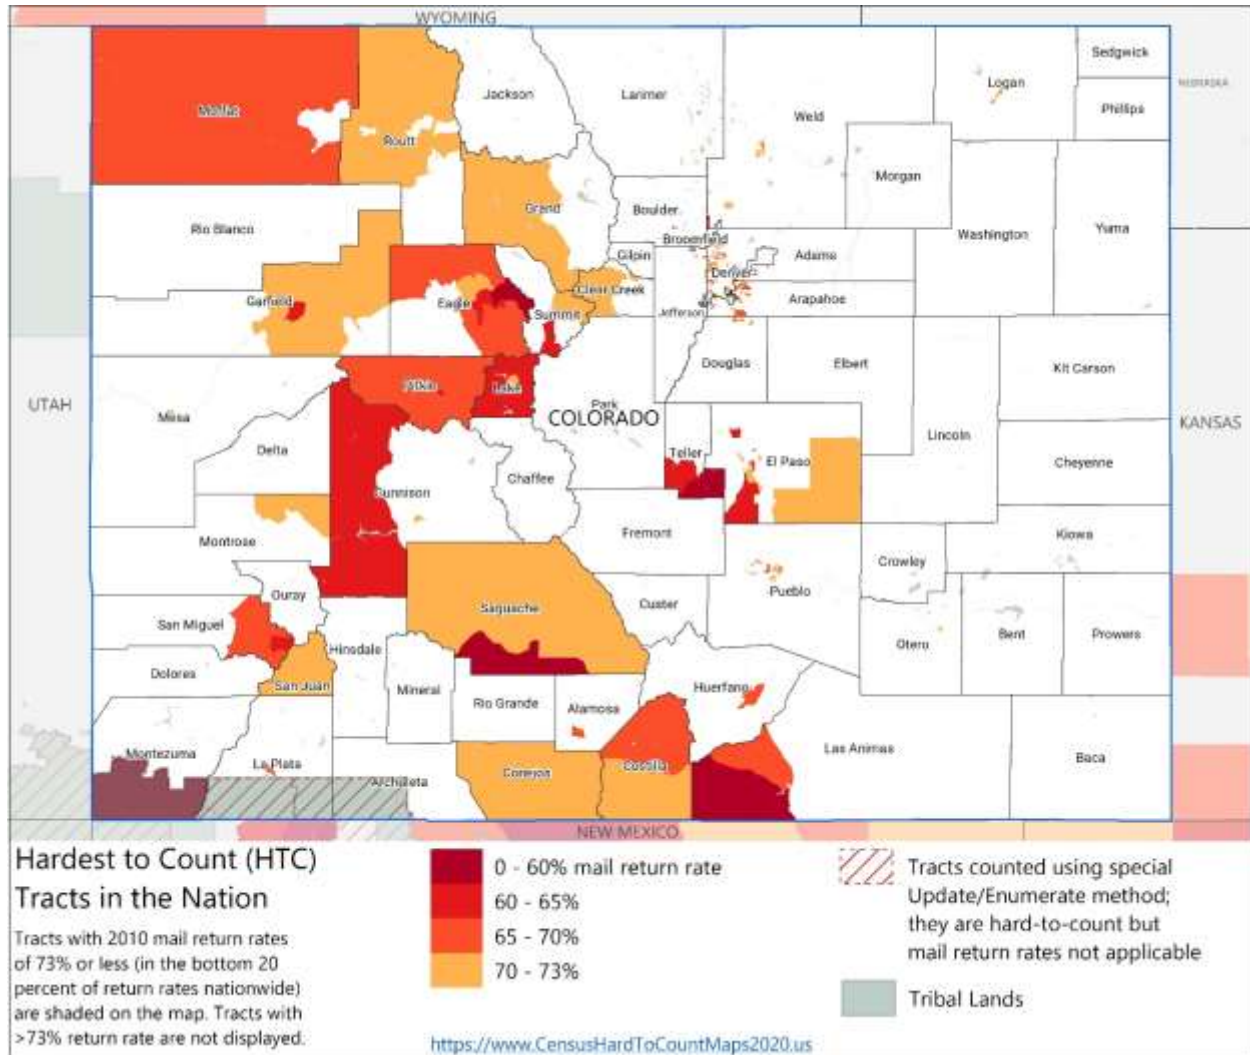

### ECONOMIC POWER

Federal funding is distributed to states and localities based on formulas that rely on census data. Based on *Counting for Dollars 2020* by Andrew Reamer of George Washington University, **Colorado received \$13,087,705,849 in FY2016** from federal funds distributed through 55 federal spending programs that are guided by data derived from the 2010 census. **That equals \$2,602.35 per Colorado resident**, on average, and every year in this decade.

Private and public sector decisionmakers often rely on census data as well. The Census Bureau has created several tools for public use, including the Economic Census and the Census Business Builder.

## ENSURING A COMPLETE COUNT

Colorado has created the **Colorado Complete Count Campaign**, and appropriated \$6 million for outreach to ensure that Colorado residents are all counted.
