

Utah and the Census

The U.S. Census Bureau's goal for the federal decennial census is to **count all the people** living in the United States, **count them only once and count them in the right place**. States care about the census because its data are used for the distribution of federal funding and political power, and is used by decision-makers in the private and public sectors at all levels.

The census is a **federal project** conducted with federal funding, although **some states, including Utah, have allocated funding for census outreach**.

This profile includes: a) what census data means for Utah in terms of political and economic power, b) key demographic data for Utah, and c) what Utah is doing to encourage a full count.

POLITICAL POWER

Every decade, the seats in the U.S. House of Representatives are recalculated based on the latest census data. The new apportionment of congressional seats will be released on Dec. 31, 2020. According to Election Data Services, **Utah is projected to keep the same number of seats**, which is 4 congressional seats. That means Utah also will keep the same number of electoral college seats.

Census data is also the foundation for **Utah's Legislature to draw congressional districts and legislative districts**.

CORE UTAH STATS

Utah's total population was 2,763,885, according to the 2010 Census. **In 2018, the Census Bureau's estimate for Utah's population was 3,161,105, a growth of 14.37% in nine years**. Utah has the 30th largest population in the nation, and its growth rate is 1st.

HARD TO COUNT POPULATIONS AND UNDERCOUNTS

The Census Bureau estimates **19.6% of people in Utah did not self-respond to the 2010 census**, representing what have come to be known as "hard to count" populations. Generally, the hard-to-count groups tend to be children younger than 5, immigrants, racial and ethnic minorities, rural residents, low-income people, homeless and Native Americans.

Nationwide, the Census Bureau estimated an overcount of 0.01% in 2010, though individual states could have either an overcount or an undercount. Both overcounts and undercounts can create inaccuracies and affect states' needs. **In Utah the overcount was estimated at 12,900**. Undercounts affect a state's federal funding and potentially congressional representation if they are on the cusp of losing or gaining a seat.

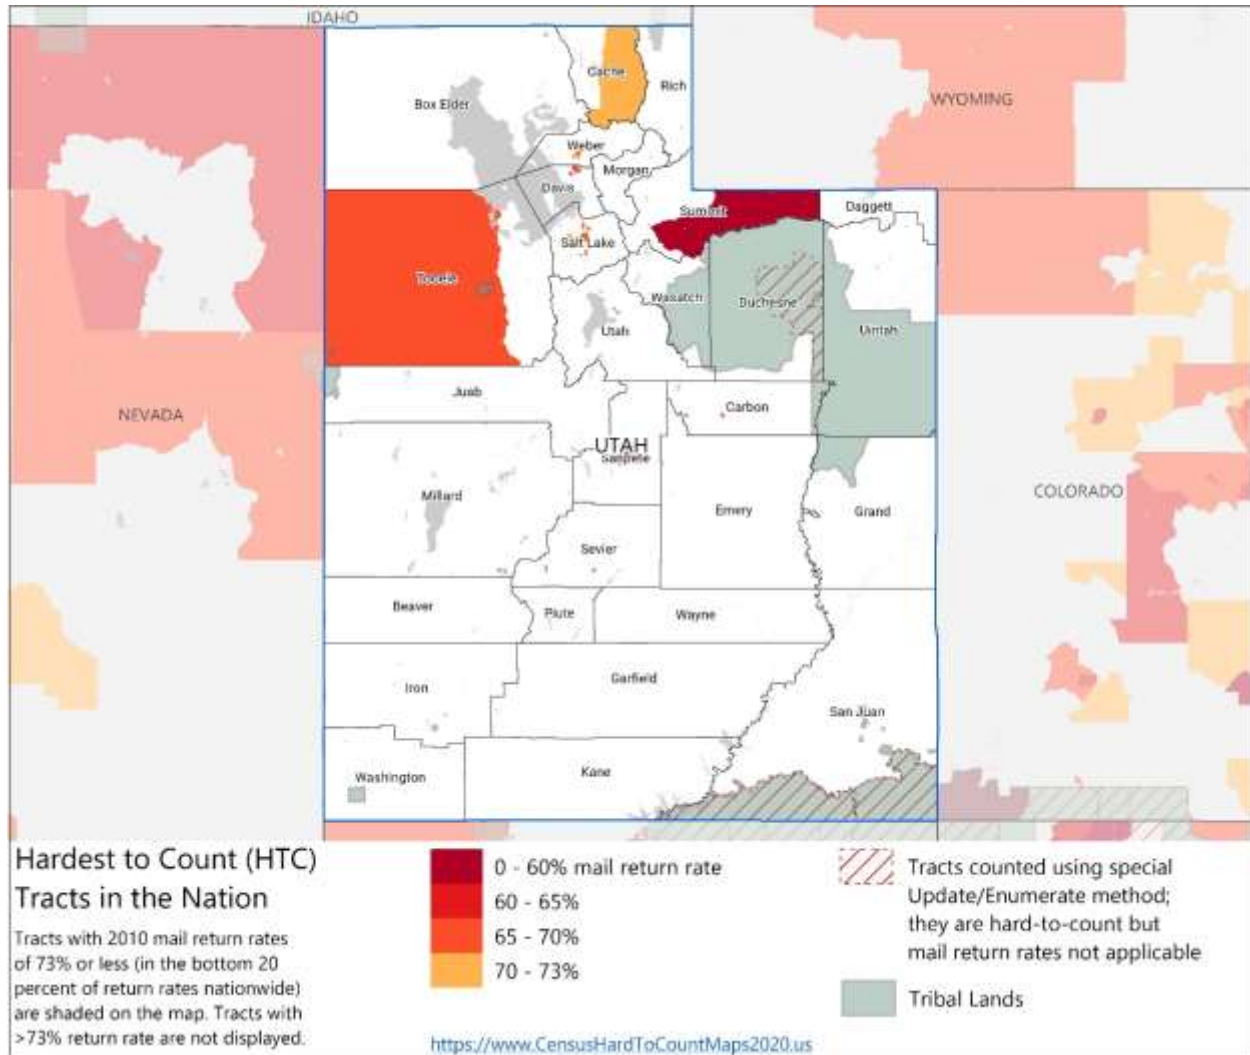

ECONOMIC POWER

Federal funding is distributed to states and localities based on formulas that rely on census data. Based on Counting for Dollars 2020 by Andrew Reamer of George Washington University, **Utah received \$5,694,470,987 in FY2016** from federal funds distributed through 55 federal spending programs that are guided by data derived from the 2010 census. **That equals \$2,060.31 per Utah resident**, on average, and every year in this decade.

Private and public sector decisionmakers often rely on census data as well. The Census Bureau has created several tools for public use, including the Economic Census and the Census Business Builder.

ENSURING A COMPLETE COUNT

Utah has created the **Utah Complete Count Committee**, and appropriated \$1,000,000 for outreach to ensure that Utah residents are all counted.
