

Wyoming and the Census

The U.S. Census Bureau's goal for the federal decennial census is to **count all the people** living in the United States, **count them only once and count them in the right place**. States care about the census because its data are used for the distribution of federal funding and political power, and is used by decision-makers in the private and public sectors at all levels.

The census is a **federal project** conducted with federal funding, although **some states have allocated funding for census outreach**.

This profile includes: a) what census data means for Wyoming in terms of political and economic power, b) key demographic data for Wyoming, and c) what Wyoming is doing to encourage a full count.

POLITICAL POWER

Every decade, the seats in the U.S. House of Representatives are recalculated based on the latest census data. The new apportionment of congressional seats will be released on Dec. 31, 2020. According to Election Data Services, **Wyoming is projected to keep the same number of seats**, which is 1 congressional seat. That means Wyoming also will also keep the same number of electoral college seats.

Census data is also the foundation for **Wyoming's Legislature to draw congressional districts and legislative districts**.

CORE WYOMING STATS

Wyoming's total population was 563,626, according to the 2010 Census. **In 2018, the Census Bureau's estimate for Wyoming's population was 577,737, a growth of 2.50% in nine years.**

Wyoming's has the 50th largest population in the nation, and its growth rate is 33rd.

HARD TO COUNT POPULATIONS AND UNDERCOUNTS

The Census Bureau estimates **20.1% of people in Wyoming did not self-respond to the 2010 census**, representing what have come to be known as "hard to count" populations. Generally, the hard-to-count groups tend to be children younger than 5, immigrants, racial and ethnic minorities, rural residents, low-income people, homeless and Native Americans.

Nationwide, the Census Bureau estimated an overcount of 0.01% in 2010, though individual states could have either an overcount or an undercount. Both overcounts and undercounts can create inaccuracies and affect states' needs. **In Wyoming the overcount was estimated at 2,800.** Undercounts affect a state's federal funding and potentially congressional representation if they are on the cusp of losing or gaining a seat.

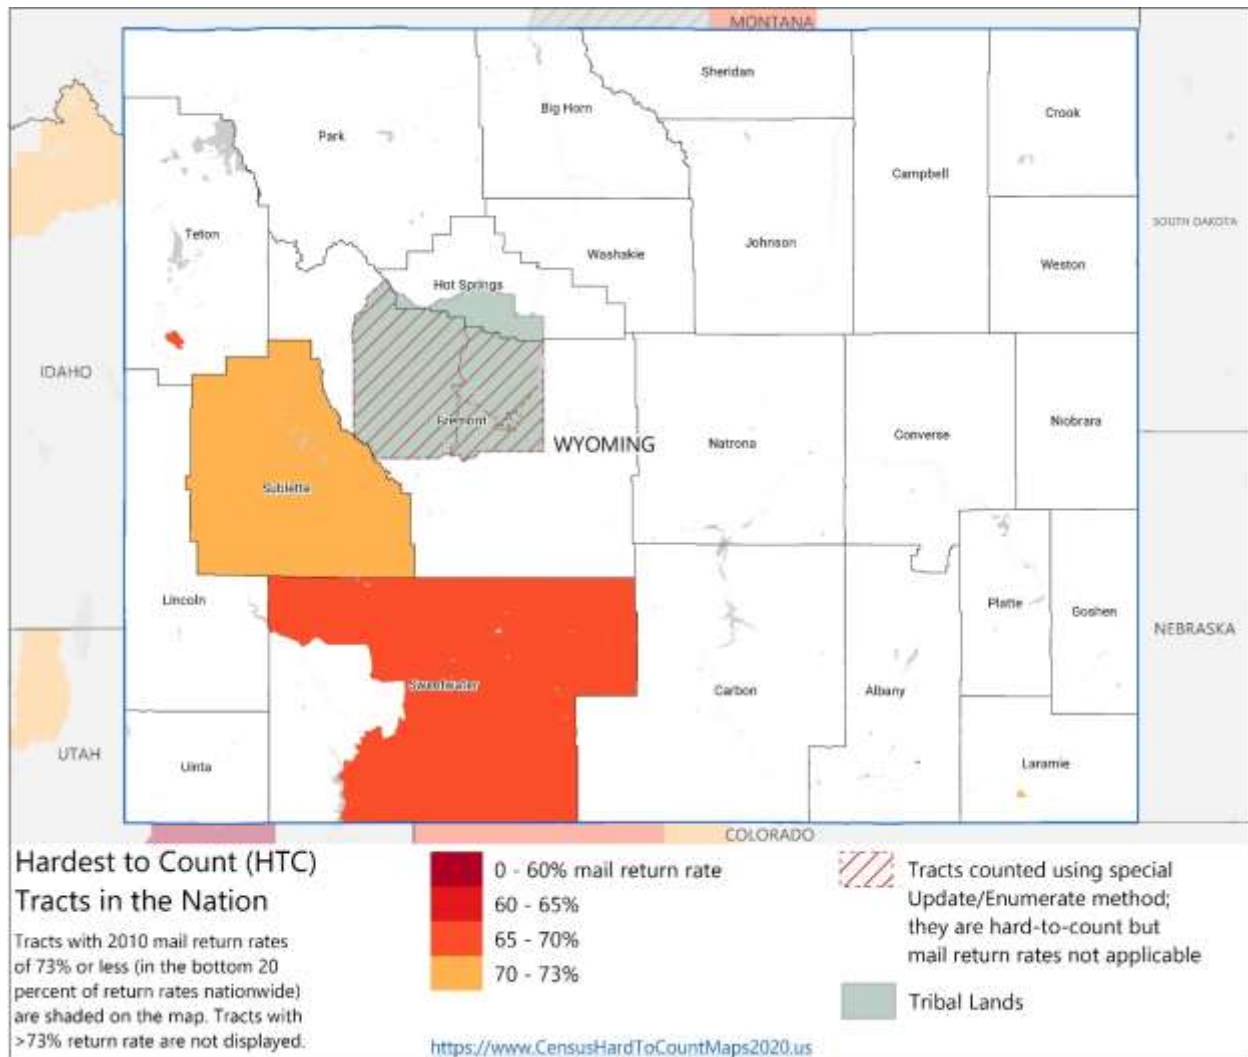

ECONOMIC POWER

Federal funding is distributed to states and localities based on formulas that rely on census data. Based on Counting for Dollars 2020 by Andrew Reamer of George Washington University, **Wyoming received \$1,355,240,322 in FY2016** from federal funds distributed through 55 federal spending programs that are guided by data derived from the 2010 census. **That equals \$2,404.50 per Wyoming resident**, on average, and every year in this decade.

Private and public sector decisionmakers often rely on census data as well. The Census Bureau has created several tools for public use, including the Economic Census and the Census Business Builder.

ENSURING A COMPLETE COUNT

Wyoming has created the **2020 Census Wyoming Counts**. While some states are providing additional funds, others have decided not to do. Their reasoning stems from the fact the census is a federal action and there are already many local committees and philanthropic and nonprofit agencies working to support it.
