

Maintaining Reliability and Resilience in a Decarbonizing System

NCSL Annual Summit

Aidan Tuohy, PhD, Senior Program Manager
EPRI Grid Operations and Planning
Aug 14, 2023

Explore EPRI's research across the Nuclear, Generation, and Power Delivery and Utilization sectors ranging from decarbonization to grid modernization to low carbon resources.

COLLABORATION

EPRI's collaborative platform is unrivaled. Our R&D:

- Leverages your research dollars
- Connects you to a global network of peers
- Accelerates deployment of technology
- Mitigates the risk and uncertainty of going it alone
- Positions you as a leader in addressing industrywide challenges

CREDIBILITY

EPRI's independent research is guided by our mission to benefit the public. We offer:

- Objective solutions
- A proven track record
- Scientifically based research you can trust

Who We Are

Founded in 1972, the Electric Power Research Institute (EPRI) is the world's preeminent independent, non-profit energy research and development organization, with offices around the world.

Our Experts

EPRI's trusted experts collaborate with more than 450 companies in 45 countries, driving innovation to ensure the public has clean, safe, reliable, affordable, and equitable access to electricity across the globe.

EXPERTISE

For more than 50 years, EPRI has been applying R&D to help solve real challenges. With EPRI, you can:

- Reduce expenses and increase productivity
- Be more resilient today and better prepared for tomorrow
- Access an industry repository of collective experiences, technical expertise, and training resources
- Extend your staff and make your teams more robust and more confident
- Benchmark, learn and share best practices
- Increase your awareness of challenges that others are facing and alternate solutions to challenges you might be facing
- Save time and money troubleshooting problems EPRI and its stakeholders have seen before

Why Must Grid Operations and Planning Evolve?

**Changing
Generation Mix**

**Active Distribution
Systems**

**Consumer Control
and Electrification**

Increasing Reliability & Resiliency Through the Transition

Percentage of Annual Hours that Solar+Wind Supply \geq 70% of Generation

Annual National Share Wind+Solar

46%

32%

RESOURCE ADEQUACY

Additional resources to meet energy needs for resiliency to extreme future scenarios

DELIVERY ADEQUACY

Regional T&D capacity to integrate renewables and DER and serve increased electrification demand

BALANCING AND FLEXIBILITY

Flexibility resources and operating reserves to manage variability and uncertainty

GRID STABILITY

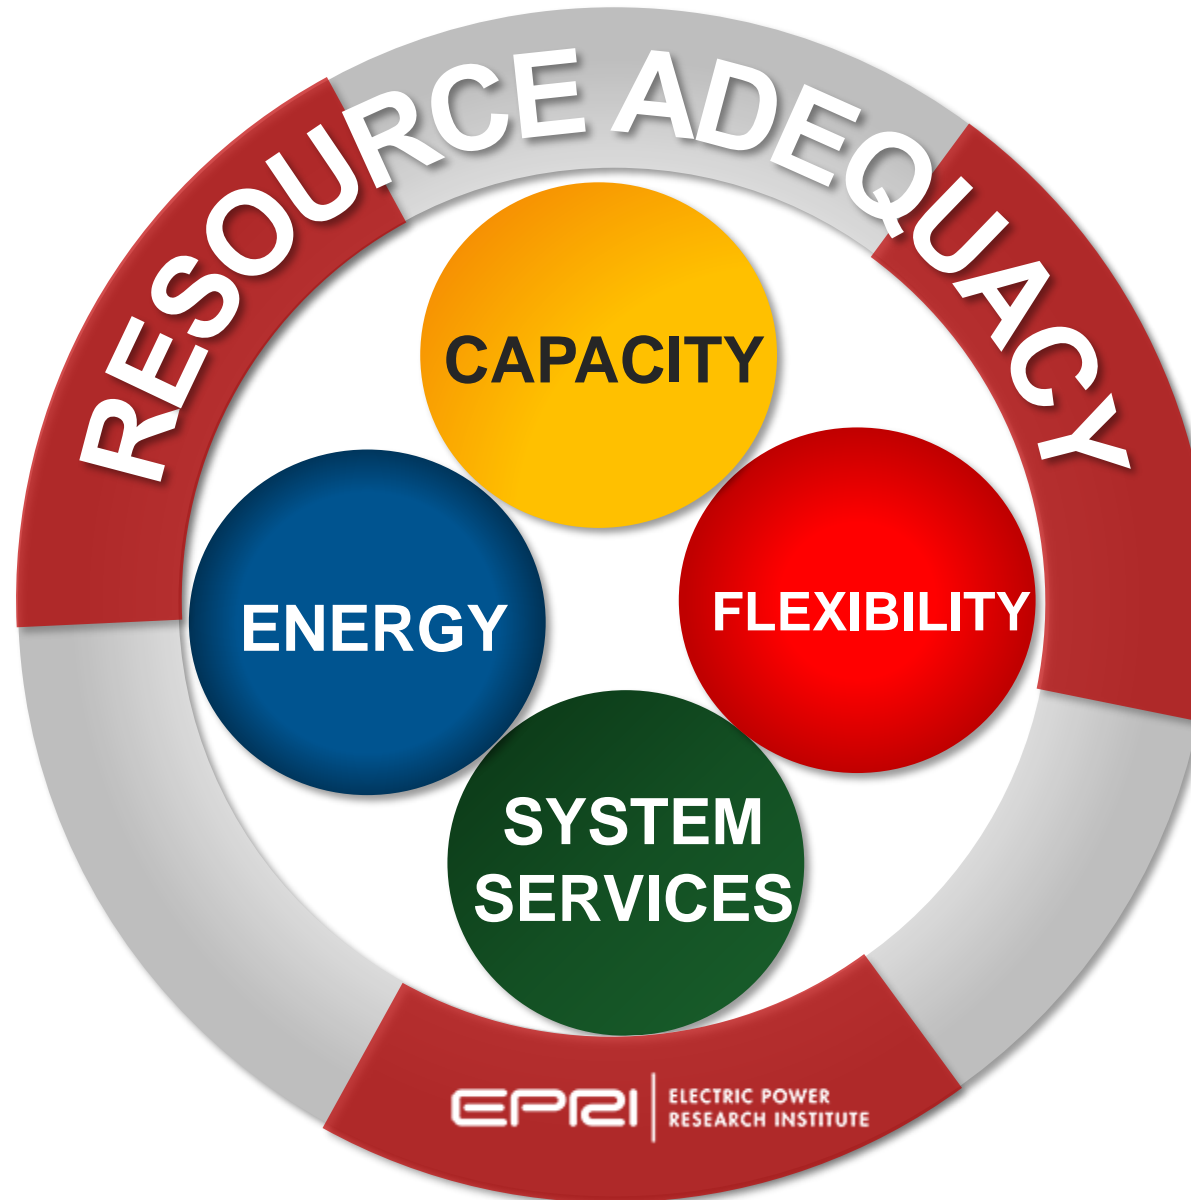

Resources and controls to maintain frequency and voltage for much faster dynamic system

A Decarbonized Grid must be more reliable and resilient as the grid becomes more dynamic, decentralized, and inverter-based in the context of changing climate and other hazards.

What does it mean to have adequate resources?

An adequate supply fleet is not just the installed MW in the ground. The capacity must have energy to sustain during critical time periods, flexibility to accommodate condition changes, and sufficient reliability services to provide when necessary

Metrics and Criteria

Different metrics expose different levels of risk

LOLE is a frequency metric and typically evaluated on average

Metrics that include magnitude and duration expose additional risk

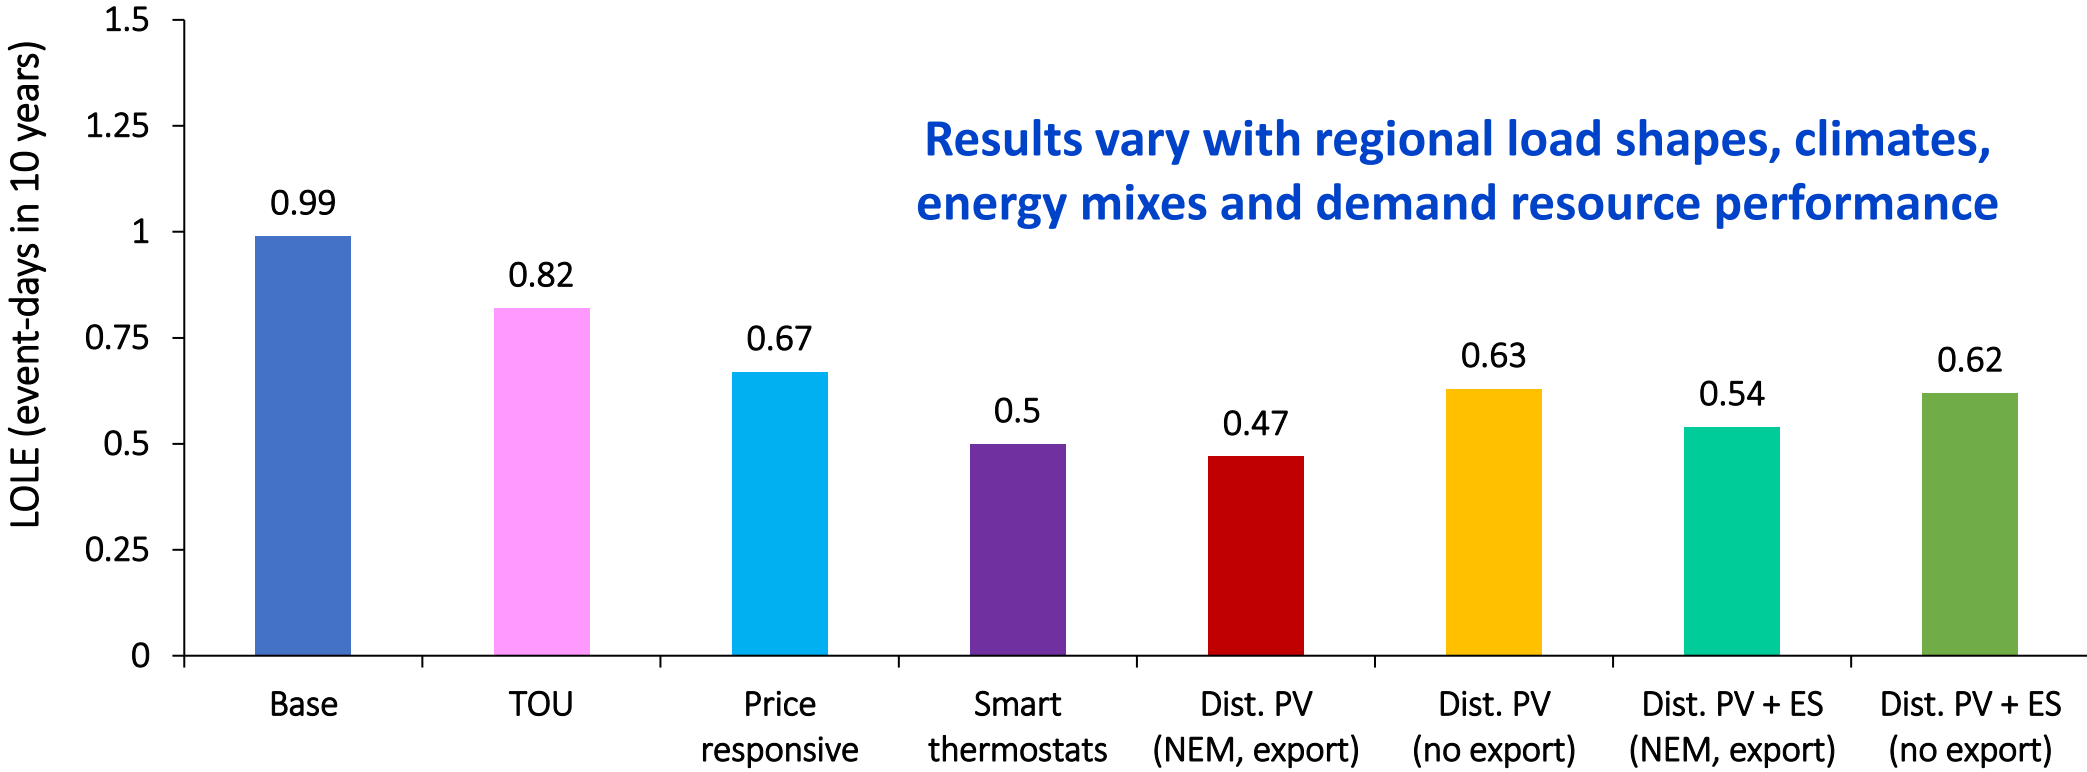

Potential for very different customer impacts for same LOLE level

NPCC Case Study: Risk conveyed by metrics			
Region	Daily LOLE	Hourly LOLE	EUE-norm.
A	0.10	0.15	0.37
B	0.10	0.34	0.99
C	0.10	0.39	3.37
D	0.10	0.25	1.00
E	0.10	0.48	2.54
F	0.10	0.28	0.34
Metric Scope	Frequency	+ Duration	+ Magnitude
Relative Risk	Same	3X	10X

EPRI Initiative provides Metric Viewer tool and guidance to select metrics that expose true risk

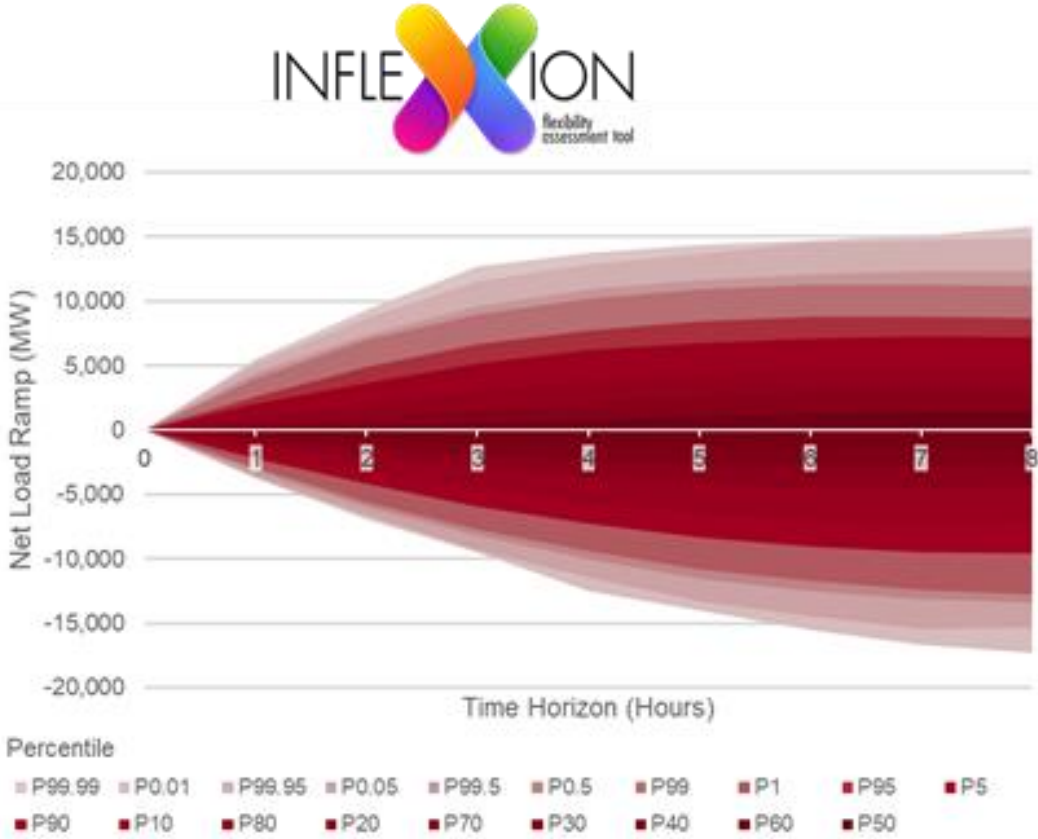

Demand Side Resources Can Support Adequacy

Potential reduction in LOLE from 900 MW (3% peak demand) of various distributed resource types (technology and tariff) for specific utility system

EPRI RAI provides methodology for modeling flexible demand contributions to RA

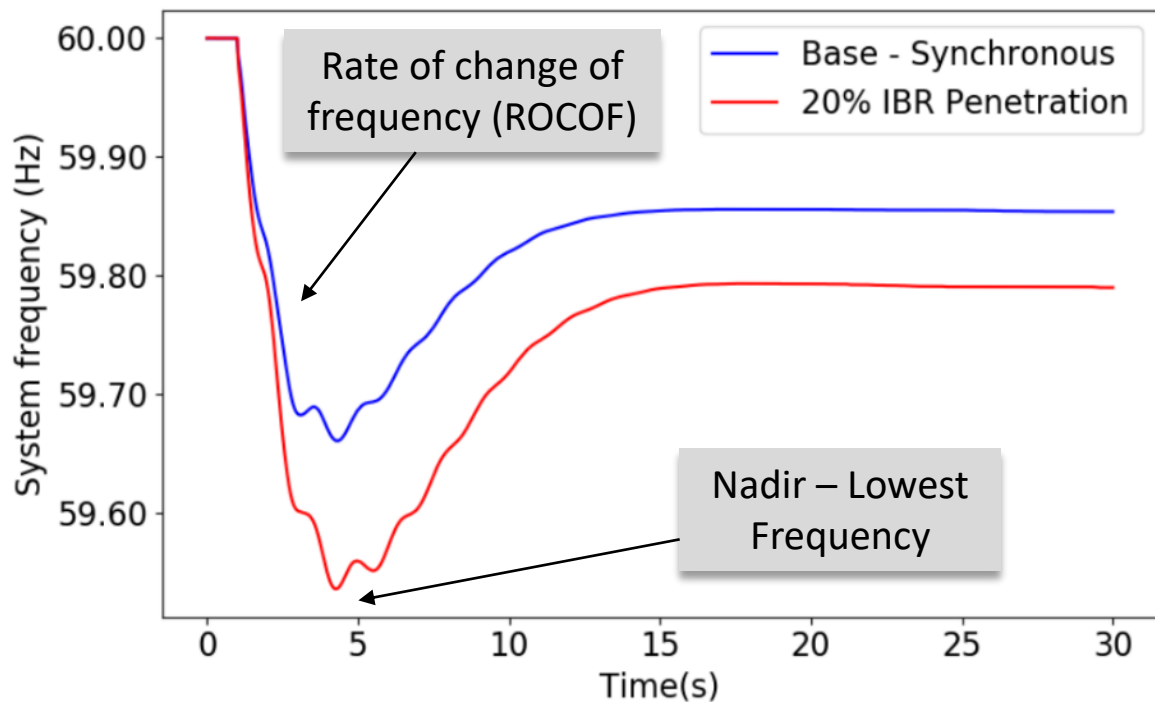

Flexibility – measuring needs and obtaining services

Need to be able to assess what is needed, and then get it from emerging resources

Grid Stability with Higher Renewables and Less Inertia

Inertia of a synchronous AC system opposes frequency changes after sudden generation loss

New Operating Practices/Capabilities

- 120 GW*s \geq Inertia **Normal**
- 120 GW*s $>$ Inertia \geq 110 GW*s **Yellow**
- 110 GW*s $>$ Inertia \geq 100 GW*s **Orange**
- 100 GW*s $<$ Inertia **Red**

Emergency BPs	Inactive
System Inertia	99,999 MW-s
SCED	00:04:00
RLC	00:00:06
STLF Forecast High	21.6
STLF Next 30 Mins	Normal
QSE ICCP	Normal

Online Inertia Monitoring and Inertia Floors

Redispatch to Reduce Largest Contingency

New Frequency Support Resources/Services

“Synthetic Inertia” from Inverter-Based Resources

Synchronous Condensers

Relative Reliability Contributions for Various Resources

- Must ensure reliability when considering new resource mix
- Not all resources are equal in “Reliability Capability”
- Synchronous resources broader & deeper ability to support reliability
- Reliability is not only consideration: Sustainability, Diversity, Economics, Emissions, among others
- Likely needs updating (2015)

EPRI whitepaper (2015):
Contributions of Supply & Demand
Resources to Required System
Reliability Services (3002006400)

WARNING: Relative rankings in table based on specific assumptions and disclaimers documented in white paper—do not use in isolation. Relative scores are based on “typical” capabilities of resources presently being installed.

		SYNCHRONOUS INTERCONNECTION					INVERTER-BASED INTERCONNECTION				DEMAND RESPONSE	
		Coal	Natural Gas Simple Cycle	Natural Gas Combined Cycle	Nuclear	Hydro	Grid Scale Wind	Grid Scale PV	Distributed PV	Distributed Battery Storage	Large (Industrial/Commercial)	Small (Aggregated)
Volt/Var Control		5	5	5	5	5	5	5	3	3	0	0
Short Circuit Contribution		5	5	5	5	5	3	3	3	3	0	0
Frequency Control	Inertial Response	5	3	5	5	5	3	0	0	0	3	0
	Primary Frequency Response (droop)	3	3	3	0	5	3	3	0	3	3	0
	Regulation	3	5	5	0	5	3	3	0	3	3	3
	Load Following/Ramping	3	5	5	0	3	3	3	0	3	3	3
	Spinning Reserve	3	5	5	0	5	3	3	3	3	5	5
Short-term Availability (fuel)		5	3	3	5	3	3	3	3	3	3	3
Long-term Availability (plant)		3	3	3	5	5	3	3	3	3	3	3
Black Start		3	3	3	0	5	0	0	0	0	0	0

Reliable system operation requires online resources aggregately capable of providing the full range of required reliability services. Synchronous Interconnection resources provide the highest contribution across the broadest range of reliability services.

Relative score for currently installed technologies:

Pre-Requisites for a Reliable, Resilient Decarbonized Grid

New Grid Operation Capabilities

New protection, control, and other technologies to reliably and resiliently operate the grid

Revised Market Designs

Markets must incent investment and properly compensate resources for grid services provided

Grid Investment and Development

Adequate investment, supply chain, and workforce to develop extensive new supply, demand, and T&D resources

Efficient Regulation and Collaboration

Faster timelines for siting, permitting, and building new infrastructure and developing and deploying new technology

Integrated Planning for Reliability and Resiliency

Tools and processes for regional investment plans across electric and other energy systems in context of changing climate and other hazards

A blue-tinted photograph of four people, two men and two women, standing in a row. They are dressed in professional attire, including lab coats and a hard hat. The text 'Together...Shaping the Future of Energy®' is overlaid in white on the image.
